

LISTING OF THE CLAIMS

1. (Previously Presented) A system for remote authoring of content, comprising:
a plurality of content files; and
an authoring system storing the plurality of content files, comprising:
an identification system to identify the plurality of content files;
a relation system to relate related content files;
a query system to request content files from a server;
a reference database to store information about the plurality of content files;
a collection system to convert the plurality of content files into at least one collection
file;
a conversion module to covert the at least one collection file into a master copy,
wherein the master copy is in one of a plurality of formats; and
a URL configuration system to identify a URL entered by a user into the at least one
collection file and to communicate with a redirect server to activate the URL.
2. (Previously Presented) The system of claim 1, further comprising a remote
workstation for a user to access the authoring system.

3. (Original) A method of remotely authoring content, comprising:
 - transmitting a plurality of content files in various formats to an authoring system;
 - identifying, by the authoring system, the plurality of content files;
 - relating, by the authoring system, the plurality of content files;
 - storing the related content files together;
 - querying a server for additional content files;
 - populating a reference database with information related to the plurality of content files;
 - creating, by a user, at least one collection file including content files;
 - producing, by the authoring system, a master copy of the collection file in a format specified by the user;
 - determining if a URL is in the collection file;
 - communicating with a redirect server to activate the URL.
